Phonebooth Launches Free Google Voice Alternative for Startups and Small Businesses

Frederick Lardinois

March 9 2010

Phonebooth.com

Phonebooth.com, a VOIP service for individuals and small businesses, just launched a free version of its service. Phonebooth, just like [Google Voice](#) and [Ribbit Mobile](#), provides its users with a free local phone number that can be [forwarded](#) to any cell phone and landline. Phonebooth also offers voicemail transcriptions. What makes it stand out from its competitors, however, is that it offers an [auto attendant](#) feature that allows you to route callers to different employees.

It's worth noting that Bandwidth.com, the company behind Phonebooth, has been providing [infrastructure services](#) to other VOIP services, including Voxeo and Yext, for more than three years. The company's VOIP network delivered almost 4 billion minutes in 2009. Bandwidth began a beta test of the paid version of Phonebooth.com last year and now has over 1,000 customers.

A Free VOIP Service that Will Grow With You

Starting today, Phonebooth will offer a free service geared towards individuals. The company also announced the general availability of its \$20/month/user option, which offers a fully featured phone system in the cloud. One of the advantages of using Phonebooth over similar services like Google Voice or [Grasshopper](#) is that the company allows users to upgrade their phone system over time. Once your company outgrows Phonebooth's basic plan, you can easily switch to a higher-end phone system (Phonebooth on Demand) with hardware IP-based phones.

Features in Phonebooth's free version:

- Free local phone number for your business
- Includes an auto attendant (Press 1 for Sales, Press 2 for Support...etc.)
- Unlimited extensions for your employees or partners
- Read your voicemail, with VM-to-email & text transcription
- 200 free minutes of inbound calling (6¢ additional)
- Includes new Contact Us Plus feature

Phonebooth's users will be able to choose local numbers from virtually everywhere in the U.S. (the service is U.S.). Sadly, though, there is no way to make your Phonebooth number appear on the caller ID for outgoing calls from your landline or cell phone.

Phonebooth doesn't currently offer any mobile apps, though the company told us earlier today that mobile apps are definitely on Phonebooth's roadmap.

Contact Plus Widget

In addition to the free VOIP service, Phonebooth is also launching a new widget for small businesses - Contact Us Plus - that allows potential customers to use Phonebooth's VOIP service to initiate a call right from the website. In addition to initiating phone calls, the Phonebooth widget can also feature additional contact info (Twitter account, email etc.), as well as your address and a map. Phonebooth's users can also opt to show phone numbers for different departments in their company in the widget.
